Dental assistants assist the operator with a variety of anaesthetic methods, including topical and general anaesthetic. Dental assistants also assist with the administration of conscious, intravenous, and general sedation by attending to the patients comfort and monitoring the patients condition throughout the delivery of anaesthetic.

Dental Assisting: Competency Reference

The outer layer of our teeth is the enamel which encases the dentin. In the middle of each tooth is what is called the pulp chamber. The pulp chamber contains blood vessels and nerves in its structure. The root of each tooth connects to the jawbone and these are held in place by your periodontal ligament.
