You can learn about home automation & Arduino and complete all of the projects found in this book without ever connecting your systems to the power plug in your wall, but if you actually want to install some of these devices in your home I really advise reading this section carefully. It is usually accepted that anything above 50V is dangerous, and 25V is usually taken as a "safe" value. For us, it means that most circuits will be safe (Arduino operates at 5V or 3.3V), the only thing where we ...
